

HAIR TRANSPLANTATION

Follicular Unit Hair Transplantation is a procedure where hair is transplanted from the back and/or sides of the head, where hair is generally permanent, to areas where hair growth is reduced or non-existent. Follicular Unit Transplantation is a hair restoration procedure where hair is transplanted exclusively in its naturally occurring groups. Follicular Unit Hair Transplants mimic the way hair grows in nature, the results will look completely natural and be indistinguishable from one's original hair.

LASER HAIR REMOVAL

Both men and women can find excess facial or body hair a nagging concern. Many find shaving, plucking, waxing, and electrolysis uncomfortable, time-consuming and with temporary results. Laser hair removal is gentle, safe, long lasting and non-invasive. With industry leading laser machines, Curves & Cure's laser hair removal procedures can safely and effectively treat areas of unwanted hair, leaving your skin silky and smooth.

LASER FACE LIFT

Improves skin tone and elasticity, reduces small wrinkles and signs of aging. Stable results are visible after the first treatment and further improvement is achieved over the next 3-5 months through collagen regeneration.

LASER DERMO SURGERY

Laser skin-resurfacing treatment reduces wrinkles and enhances skin texture without the use of chemical peels or filling procedures. Is an effective treatment for scars, moles, neavus, warts, acne marks, spider veins, fibroma, xantelasma, hyperkeratosis, etc. Advantages are, no pain, no anesthesia, no stitches, no infections and zero side effects.

RADIO FREQUENCY SURGERY

Radio Frequency surgery involves passing of radio waves at varying frequency to treat resurfacing of scars due to chicken pox or acne, hair restoration, resection of keloid among many other skin conditions. Advantages are rapid healing, reduced treatment time and aesthetic results.

With more than 22 years of experience, Dr. Parikh has been and continues to be highly respected for his individualized approach to cosmetic surgery.

Dr. Parikh's dedication to this art form is firmly rooted in the belief of a surgeon's ability to help people feel better about their bodies, and in turn themselves.

“ TO ME THERE IS NOTHING MORE WONDERFUL THAN SEEING A PATIENT HAPPY WITH THE RESULTS OF THEIR SURGERY ”

Dr. Bijal V. Parikh
Plastic Surgeon

NOSE JOB

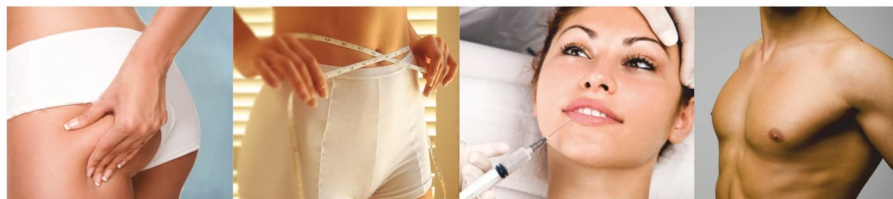

A small or depressed nose is augmented with bone graft or implants to achieve a well shaped and proportioned nose.

SMILE SURGERY

Create an artificial dimple & cosmetic lip shaping.

AESTHETIC SURGERY

BREAST SURGERY

LIPOSUCTION

This is one of the most popular conventional cosmetic surgery. The safe and effective Tumescence technique is used with the help of special powered instruments to liquefy and remove body fat through a small incision near the affected area.

TUMMY TUCK

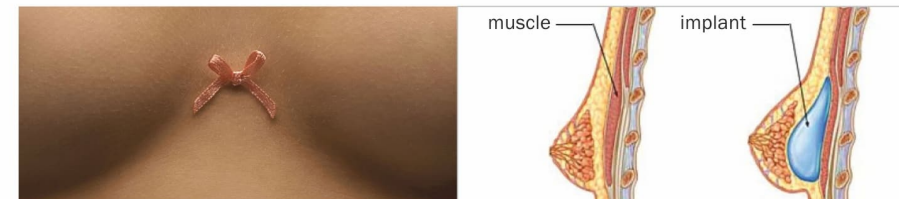

The procedure is ideal for flabby abdomen due to weak muscles and excess skin. Fat and skin are excised while tightening the abdominal muscles.

LIPO INJECTION

Previously extracted and preserved fat is injected to augment lips, cheeks or breasts. Fat is injected under the wrinkles to fill and achieve a smooth appearance.

GYNECOMASTIA

Procedure to correct the fullness in a man's chest. Cosmetic correction is achieved via liposuction without scarring.

BREAST AUGMENTATION

Procedure to augment a woman's breast with silicone / saline implants or one's own fat, to enlarge and enhance the size and shape.

BREAST REDUCTION

Skin and excess tissues are excised to reduce large breasts in women. For moderate reduction, a circum areolar incision is made and liposuction is performed to limit scarring.

BREAST LIFT

Procedure to tighten and elevate loose or sagging breasts. Nipple areola complex is also appropriately corrected.

BREAST RECONSTRUCTION

Generally performed post cancer surgery, is done by transplanting muscle-fat-skin from the lower abdominal area or using implants. Nipple areola complex is also reconstructed.
